

- 1989: license from Japanese company **muRata**
- original piezo production focused on piezoceramic converters and ringers as substitution for previous telephone inserts and electromechanical buzzers

- development and production of piezoceramic discs, quadrate plates, membranes with various diameters, piezoceramic converters and ringers

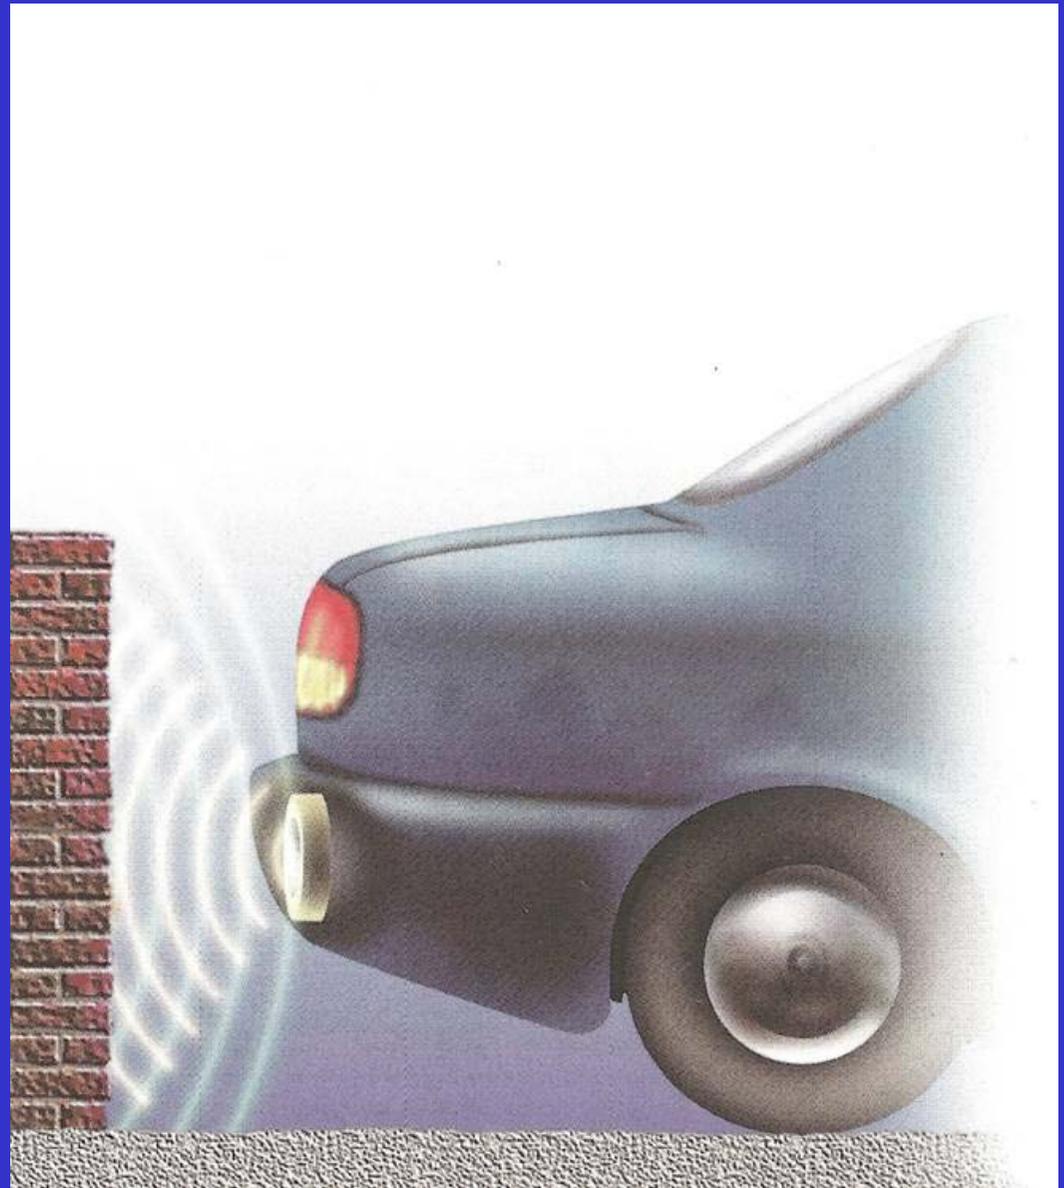

- mass production of thin piezoceramic elements (thickness 100 – 300 microns) with various electrode configuration (according to customer request),
- extrusion and punching technology based on Murata licence

- application for parking sensors
- by the reverse driving the ultrasonic sensors measure the distance between car bumper and obstacles by acoustic ultrasonic signal

Ceramic production

TESLA

STROPKOV - akciová spoločnosť

- powder production (soft material of NAVYII type 200 – EU standard – similar to Morgan PZT5A1 or CeramTec P5)
- powders are based on system PZT + Nb

Ceramic production - extrusion

TESLA

STROPKOV - akciová spoločnosť

Ceramic production - stamping

TESLA

STROPKOV - akciová spoločnosť

Ceramic production - sintering

What can we offer?

TESLA

STROPKOV - akciová spoločnosť

- metallization, polarization, gluing, measuring and testing of piezoelements according to customer's requirements,
- development (and sales) of automatic machines for metallization, polarization, gluing, measuring and testing of piezoelements,
- production of special piezoceramic elements according to customer's requirements,
- sales of sintered thin piezoceramic elements (thickness 100 – 300 microns).
